Preface

KPMG is one of the largest auditing and consulting firms in the world with offices in over one hundred and twenty countries.

We assist our clients in establishing accounting practices that are in accordance with international or individual country accounting practices. Accordingly, we have developed a comparative study of international, US, and Brazilian accounting practices. This is a summary and does not identify all differences contained in the original texts that were consulted during its preparation. Furthermore, its use should not preclude research in the original literature or consultation with professionals specialized in the area.

The convergence of accounting practices in the international ambit has become the reality at the start of this century, and has occurred within a context of globalized markets and the increasing presence of foreign capital in Brazil.

International bodies, including IASC, IOSCO, UE and SEC, have sponsored the process to converge accounting practices, viewed as valuable tool to achieve important factors such as synergy between the markets, the flow of investments at global levels, etc.

Within this context, KPMG has, for several years, been examining the differing and converging aspects between international accounting practices, Brazilian practices and American practices, this has had an important influence on accounting practices given the significant investment in the country.

International accounting practices (IAS) issued by the International Accounting Committee (IASC), today, constitute a source of reference for worldwide accounting practices. Due to the fact that these practices represent a set of high level standards that are constantly up date with the current demands of the world market, they have gradually been accepted in several countries as local accounting practices, or these latter practices are harmonized with international practices.

What has occurred in Brazil is not different, since Brazilian accounting practices have been revised to be consistent with international practices. The reform of Corporation Law, to be voted by the Parliament, has reflected this tendency, whereby various international accounting concepts, mainly with respect to accounting for financial lease operations, segmented information, cash-flow statements, etc, have still not been included as part of the Brazilian accounting practices.

The professionals from KPMG have a fundamental commitment to accompany the development of accounting practices within this context for all of the levels described above, and today have a network of contacts and are organized in groups specialized by subject and will contribute to developing standardizing accounting practices within this context.

The combination of our wide client base and our service network in the world's most important financial markets places us in a privileged position to provide the advice required by our clients seeking to participate in the international financial markets.

<div data-bbox="251 204 505 228">(IAS 16, IAS 22, IAS 38)</div> <p data-bbox="129 304 602 384">Depreciation should be allocated on a systematic basis each fiscal period during the useful lives of the assets.</p> <p data-bbox="129 568 620 711">No specific depreciation method is recommended, although the method chosen should be applied consistently. The useful lives of the assets should be revised periodically, and the depreciation rates should be adjusted.</p> <p data-bbox="129 895 556 975">A change in depreciation method is a change in accounting estimate and should therefore be accounted for prospectively.</p>	<div data-bbox="751 204 1068 228">(D40, APB 6, APB 12, ARB 43)</div> <p data-bbox="660 304 1152 360">Depreciation should be recognized in a rational and systematic manner.</p> <p data-bbox="660 392 1152 536">Depreciation need not be recognized on individual works of art or historical treasures whose economic benefit or service potential is used up so slowly that their estimated useful lives are extraordinarily long.</p> <p data-bbox="660 568 1097 679">Different depreciation methods are permitted to depreciate tangible capital assets as long as the method chosen is systematic and rational, with the exception of annuity methods.</p> <p data-bbox="660 895 1152 1062">A change in accounting in depreciation method (but not of useful life or residual value) is dealt with as a change in accounting policy, for which the cumulative effect to date is put through the current year income statement after extraordinary items.</p>	<div data-bbox="1213 204 1661 228">(NBC-T-4, Pronouncement VII IBRACON)</div> <p data-bbox="1192 304 1665 384">Depreciation should be allocated on a systematic basis each fiscal period during the useful lives of the assets.</p> <p data-bbox="1192 568 1683 711">No specific depreciation method is recommended, although the method chosen should be applied consistently. The useful lives of the assets should be revised periodically, and the depreciation rates should be adjusted.</p> <p data-bbox="1192 743 1643 855">Although depreciation should be made in accordance to useful lives, usually enterprises adopt fiscal rates that are deductible for tax purposes.</p> <p data-bbox="1192 895 1665 1007">Even though it is not clearly stated in the accounting rules, the changes in depreciation method are usually considered as a change in accounting estimate and recorded prospectively.</p>

IAS 3. Statements of cash flows

(IAS 7)

These statements should be produced as an integral part of the financial statements (IAS 7).

Cash and cash equivalents

Cash flows are inflows and outflows of cash and cash equivalents; they therefore exclude the effects of exchange rate changes on cash and cash equivalents as this involves no inflow or outflow.

Cash comprises cash on hand and demand deposits. Cash equivalents are short-term, highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value.

“Short-term” is not defined but the standard suggests a cut-off of three months maturity (on acquisition by the company). Bank overdrafts repayable on demand are dealt with as cash and cash equivalents where they form an integral part of the company’s cash management.

Classification and presentation of cash flows

The cash flow statement should split cash flows during the period between operating, investing and financing activities.

A company should choose its own policy for classifying each of interest and dividends paid as operating or financing activities and each of dividends received as operating or investing activities.

USA 3. Statements of cash flows

(SFAS 95, C25)

All entities, including business enterprise and NPOs, but excluding defined benefit pension plans, certain other employee benefit plans and certain investment companies, to provide a statement of cash flows in general purpose financial statements.

The SEC will accept without reconciliation to US-GAAP, a statement of cash flows included in Form 20-F that complies with IAS 7.

Cash and cash equivalents

A cash flow is an increase or decrease in cash and cash equivalents resulting from a transaction. It therefore excludes the effect of exchange rate changes on cash and cash equivalents.

Cash and cash equivalents include currency on hand, demand deposits, and short term highly liquid investments (with original maturities of three months or less, or with remaining maturities of three months or less at the time of acquisition).

Classification and presentation of cash flows

The statement of cash flows classifies cash receipts and payments as either, operating, investing, or financing activities.

Interest received and paid (net of interest capitalized, which is classed as investing), dividends received and all taxes are included under operating activities. Dividends paid are classed as financing activities.

BR 3. Statements of cash flows

(Law 6404/76, PO 24/92, NPC 20 IBRACON)

Presentation of statements of changes in financial position is required. The statements of cash flows may be disclosed as supplementary information.

According to the project for alteration of Law 6404/76 the statements of cash flows will replace the statement of changes in financial position.

Cash and cash equivalents

Cash and cash equivalents include not only cash on hand and demand deposits, but also other types of accounts which possess the same liquidity characteristics as cash.

Cash equivalents include highly liquid short term investments.

Classification and presentation of cash flows

The statement of cash flows classifies cash receipts and payments as either, operating, investing, or financing activities.

Dividends received are classed as operating activities and dividends paid are classed as financing activities. Interest received and paid and income taxes paid are classified as operating activities.

IAS3. Statements of cash flows	USA3. Statements of cash flows	BR3. Statements of cash flows
<p data-bbox="342 204 418 228">(IAS 7)</p> <p data-bbox="131 300 600 459">Taxes paid should be classified as operating activities unless any particular tax cash flow (not merely the related expense in the income statement) can be specifically identified with, and therefore classified as, financing or investing activities.</p> <p data-bbox="131 486 618 718">Net cash flows from all three categories are totaled to show the change in cash and cash equivalents during the period, which is then reconciled to opening and closing cash and cash equivalents. The company should disclose the components of cash and cash equivalents and reconcile these to the equivalent figures presented in the balance sheet.</p> <p data-bbox="131 746 618 890">When a hedging instrument is accounted for as a hedge of an identifiable position, the cash flows of the hedging instrument are classified in the same manner as the cash flows of the position being hedged.</p> <p data-bbox="131 917 600 1149">Cash flows from operating activities may be presented either by the direct method (gross receipts from customers etc.) or the indirect method (net profit and loss for the period with adjustments to arrive at the total net cash flow from operating activities). Although the standard encourages the use of the direct method, in practice the indirect method is usually used.</p>	<p data-bbox="828 204 991 228">(SFAS 95, C25)</p> <p data-bbox="662 481 1082 625">Net cash flows from all three activities are totaled to show the change in cash and cash equivalents during the period, which is then reconciled to the opening and closing cash and cash equivalents.</p> <p data-bbox="662 742 1155 853">Cash flows resulting from certain contracts that are hedges of identifiable transactions should be classified in the same cash flow category as the cash flow from hedged items.</p> <p data-bbox="662 912 1155 1176">While companies are encouraged to report gross operating cash flows by major classes of operating cash receipts and payments (the direct method), presenting such items net (the indirect method) is allowable in respect of operating activities. Under the direct method, the statement begins with cash from operations by source (e.g. amounts received from/paid to customers, suppliers, and employees).</p> <p data-bbox="662 1203 1119 1434">The indirect method starts with net income and reconciles it to net cash flows from operating activities by adjusting for non-cash items (such as depreciation) and the net change in most working capital items. If the indirect method is used, amounts of interest paid (net of amounts capitalized) and income taxes paid during the period are disclosed.</p>	<p data-bbox="1210 204 1670 228">(Law 6404/76, PO 24/92, NPC 20 IBRACON)</p> <p data-bbox="1193 481 1616 625">Net cash flows from all three activities are totaled to show the change in cash and cash equivalents during the period, which is then reconciled to the opening and closing cash and cash equivalents.</p> <p data-bbox="1193 742 1647 798">Brazilian corporate law does not deal with the treatment of cash flows resulting from hedges.</p> <p data-bbox="1193 912 1647 1088">Cash flows from operating activities may be presented either by the direct method (gross receipts from customers etc.) or the indirect method (net profit and loss for the period with adjustments to arrive at the total net cash flow from operating activities).</p>

IAS 3. Statements of cash flows**(IAS 7)**

All financing and investing cash flows should be reported gross, with the following exception: receipts and payments may be netted where the items concerned (e.g. sale and purchase of investments) are turned over quickly, the amounts are large and the maturities are short.

Other matters

Non-cash investing or financing transactions (e.g. share-for-share acquisition, debt to equity conversion) should be disclosed in order to provide relevant information about investing and financing activities.

Cash flows arising from a company's foreign currency transactions should be translated into the reporting currency at the exchange rate at the date of the cash flow (where exchange rates have been relatively stable a weighted average can be used). Cash flows of foreign subsidiaries are translated also at actual rates (or appropriate average rates). The effect of exchange rate changes on the balances of cash and cash equivalents are presented as part of the reconciliation of the movements therein.

Financial institutions may report on a net basis certain advances, deposits, and repayments thereof.activities.

USA 3. Statements of cash flows**(SFAS 95, C25)**

Under both the direct and the indirect method, cash inflows and outflows from investing and from financing activities should be reported on a gross basis.

Other matters

Information about all investing and financing activities of a company during a period that affect recognized assets or liabilities but do not result in cash receipts or payments are also disclosed. For example, the initial recording of a capital (finance) lease results in the recognition of a leased asset and a corresponding liability in the balance sheet without affecting cash flows.

Cash flows denominated in foreign currencies are translated into the reporting currency using the exchange rates in effect at the time of the cash flows (although a weighted average exchange rate for the period may be used). Exchange rate effects on cash balances held in foreign currencies must be reported as a single line item in the statement of cash flows.

Banks, savings institutions and credit unions are permitted to report net cash receipts and payments for deposits placed with and withdrawn from other financial institutions, for time deposits accepted and repaid and for loans made to and collected from customers.

BR 3. Statements of cash flows**(Law 6404/76, PO 24/92, NPC 20 IBRACON)**

No specific requirements to report gross amounts. Usually the amounts on gross basis are considered.

Other matters

Non-cash investing or financing transactions (e.g. share-for-share acquisition, debt to equity conversion) should be disclosed in order to provide relevant information about investing and financing activities.

No specific requirements to cash flows in foreign currency. The applicable procedure is similar to IAS.

No specific rules for financial institutions.

<div>IAS</div> <div>4. Extraordinary items , prior period adjustments, changes in accounting policy, method, and in accounting estimates</div>	<div>USA</div> <div>4. Extraordinary items , prior period adjustments, changes in accounting policy, method, and in accounting estimates</div>	<div>BR</div> <div>4. Extraordinary items , prior period adjustments, changes in accounting policy, method, and in accounting estimates</div>
<p>(IAS 1, IAS 8, IAS 12, IAS 16, IAS 38, SIC 8)</p> <p>Extraordinary items Extraordinary items are presented, net of tax, as a line item separate from profit on ordinary activities after tax.</p> <p>They are defined as income or expenses that arise from events that are clearly distinct from the ordinary activities of the enterprise and therefore are not expected to recur frequently or regularly.</p> <p>Prior period adjustments Prior period adjustment is the benchmark treatment for:</p> <ul style="list-style-type: none"> ■ certain changes in accounting policies; and ■ corrections of fundamental errors. 	<p>(SFAS 16, A35, A06, I13, APB 9, APB 20, APB 30, SAB 67)</p> <p>Extraordinary items Extraordinary items are reported separately after the caption, “income after tax from continuing operations”. The amount of the extraordinary item is shown net of tax with related tax disclosed in parentheses on the face of the income statement.</p> <p>Extraordinary items are defined as events that are both unusual in nature and infrequent in occurrence. These terms are defined as follows:</p> <ul style="list-style-type: none"> ■ Unusual in nature The underlying event or transaction possesses a high degree of abnormality and is of a type clearly unrelated to, or only incidentally related to, the ordinary and typical activities of the entity, taking into account the environment in which the entity operates. ■ Infrequent in occurrence The underlying event or transaction is of a type that would not reasonably be expected to recur in the foreseeable future, taking into account the environment in which the entity operates. <p>In practice, an event or transaction is considered to be an ordinary and usual activity of the reporting company unless the evidence clearly supports its classification as an extraordinary item.</p> <p>Prior period adjustments In single period financial statements, prior period adjustments are reflected as adjustments of the opening balance of retained earnings.</p>	<p>(Pronouncement XIV IBRACON, PO CVM 24/92, Law 6404/76)</p> <p>Extraordinary items Extraordinary items (net of income tax) must be segregated from income from ordinary operations, and must be reported as a separate line item in the income statement. Preferably, extraordinary items should be disclosed in the income statement on a per item basis, however, this level of detail may alternatively be disclosed in the notes to the financial statements.</p> <p>Events or transactions that meet the characteristics described below must be classified as extraordinary items:</p> <ul style="list-style-type: none"> ■ the event or transaction is of an unusual nature, presenting a high level of abnormality, and does not relate to the enterprise’s ordinary activities; ■ the event or transaction is one which would not be expected to occur frequently; and ■ the value of the event or transaction must be relevant in relation to income before extraordinary items. <p>Prior period adjustments Adjustments to the opening balance of retained earnings are permitted for:</p> <ul style="list-style-type: none"> ■ corrections of errors in prior periods not related to subsequent events; and ■ changes in accounting policies.

<div>IAS</div> <div>4. Extraordinary items , prior period adjustments, changes in accounting policy, method, and in accounting estimates</div>	<div>USA</div> <div>4. Extraordinary items , prior period adjustments, changes in accounting policy, method, and in accounting estimates</div>	<div>BR</div> <div>4. Extraordinary items , prior period adjustments, changes in accounting policy, method, and in accounting estimates</div>
<p>(IAS 1, IAS 8, IAS 12, IAS 16, IAS 38, SIC 8)</p> <p>Where a prior period adjustment is applicable, the opening balance of retained earnings and the comparatives are restated.</p> <p>In both cases, IAS allows an alternative treatment whereby the adjustment may be put through in the current year with no restatement required.</p> <p>However, if neither the benchmark treatment nor a current year adjustment are possible for a change in an accounting policy, the change should be made prospectively.</p> <p><i>Changes in accounting policy and method</i> A change in accounting policy should be made where required to adopt a new IAS or in any case where the change will result in a more appropriate presentation of events or transactions in the financial statements.</p> <p>In either case, if the company chooses the current period adjustment method of effecting the change, it should give pro forma information on the prior year adjustment basis. In all cases the effect of the change on all periods presented should be disclosed, together with the reason for the change.</p> <p>All new IASs either have their own transitional rules or, failing that, are by default effected as a change of accounting policy.</p>	<p>(SFAS 16, A35, A06, I13, APB 9, APB 20, APB 30, SAB 67)</p> <p>When comparative statements are presented, corresponding adjustments are made of the amounts of net income, its components, the balances of retained earnings, and other affected balances for all of the periods presented to reflect the retrospective application of the prior period adjustments.</p> <p>Prior period adjustments may only be made:</p> <ul style="list-style-type: none"> ■ to correct errors in prior period financial statements; ■ for certain changes in accounting principles; ■ for certain adjustments related to prior interim periods of the current fiscal year; or ■ to reflect accounting changes that are in effect the statements of a different reporting entity (e.g. pooling-of-interests). <p><i>Changes in accounting policy and method</i> A change in accounting policy must be explained and justified as preferable. The term accounting principle also includes the methods of applying principles.</p> <p>In most instances prior periods are not adjusted. Instead, the cumulative effect (net of tax) of the change should be shown in the income statement, after extraordinary items and before net income, in the year in which the change occurs. Income before extraordinary items and net income should be shown on a pro forma basis on the face of the income statement for all periods presented. The effect of adopting the new principle on income before extraordinary items and on net income in the period of the change should also be disclosed.</p>	<p>(Pronouncement XIV IBRACON, PO CVM 24/92, Law 6404/76)</p> <p><i>Changes in accounting policy and method</i> A change in accounting policy must be explained and justified as preferable.</p> <p>The effects of changes in the accounting practices are classified as prior year adjustments. However, the financial statements are not restated. If the effect of the adjustments is relevant an appropriate disclosure should be made in the notes.</p>

IAS 4. Extraordinary items , prior period adjustments, changes in accounting policy, method, and in accounting estimates	USA 4. Extraordinary items , prior period adjustments, changes in accounting policy, method, and in accounting estimates	BR 4. Extraordinary items , prior period adjustments, changes in accounting policy, method, and in accounting estimates
<p>(IAS 1, IAS 8, IAS 12, IAS 16, IAS 38, SIC 8)</p> <p>A change in depreciation method, useful life or residual value does not qualify as a change in accounting policy.</p> <p><i>Changes in accounting estimate</i> Changes in accounting estimates are included in the net profit or loss for the period in which the change occurs (or the period of the change and future periods if the change affects both). Where material, the effect should be disclosed.</p>	<p>(SFAS 16, A35, A06, I13, APB 9, APB 20, APB 30, SAB 67)</p> <p>In the following cases, however, the financial statements of prior periods should be restated:</p> <ul style="list-style-type: none"> ■ a change from LIFO to another method of inventory valuation; ■ a change in the method of accounting for long-term construction-type contracts; and ■ a change to or from the full cost method of accounting that is used in the extractive industries. <p>These general rules do not apply to a change which results from the initial adoption of a new accounting pronouncement.</p> <p>A change from one method of computing depreciation to another is a change in accounting principle and should be accounted for accordingly. A change in estimated useful life or residual value, however, is a change in an accounting estimate and should be accounted for prospectively.</p> <p><i>Changes in accounting estimate</i> Changes in accounting estimates should be accounted for in the period of the change as if only that period is affected by the change, or in the period of the change and future periods if those periods are affected.</p>	<p>(Pronouncement XIV IBRACON, PO CVM 24/92, Law 6404/76)</p> <p>A change in depreciation method, useful life or residual value is not treated as a change in accounting policy.</p> <p><i>Changes in accounting estimate</i> Changes in accounting estimates are included in the net profit or loss for the period in which the change occurs (or the period of the change and future periods if the change affects both). Where material, the effect should be disclosed.</p>

<div>IAS</div> <div>5. Research and development expenses</div>	<div>USA</div> <div>5. Research and development expenses</div>	<div>BR</div> <div>5. Research and development expenses</div>
<p>(IAS 36, IAS 38)</p> <p>Research is original and planned investigation undertaken with the prospect of gaining new knowledge and understanding. Research costs are written off as incurred.</p> <p>Development is the application of research findings or other knowledge to a plan or design for the production of new or substantially improved materials, products, etc; it does not include the maintenance or enhancement of the running of ongoing operations.</p> <p>Development costs should be recorded as expenses. Only costs incurred in a project which meets the following criteria may be capitalized:</p> <ol style="list-style-type: none"> the product/process is clearly defined and the costs attributed to it can be identified separately; the technical feasibility of the product has already been shown; management has indicated its intention to produce the product/process and place it on the market, or use it; there is a clear indication of a future market for the product/process or, if the product/process is intended for internal use, its usefulness has been clearly shown; there are adequate resources, or resources will be available to complete the project and place the process/product on the market. <p>The deferred development costs should be limited to the amount the company can reasonably expect to recover from future related earnings, taking into consideration the future development costs and the costs of production, sale and related administration.</p>	<p>(SFAS 2, SFAS 68, R55)</p> <p>US-GAAP defines the terms research and development in a similar manner to IAS. Only the costs of materials, equipment, facilities and intangibles purchased from others used in research and development activities which have alternative future uses are capitalized and amortized.</p> <p>With the exception of certain internally developed computer software, all other research and development costs are not capitalized under US-GAAP, but rather should be charged to expense as incurred.</p>	<p>(Law 6404/76, Pronouncement VIII IBRACON, RIR 99, Art. 327)</p> <p>Research and development expenses that will contribute in the generation of future income for more than one fiscal period may be capitalised as a deferred asset.</p> <p>Deferred research and development costs should be valued at cost less accumulated amortization. The amortization period should be determined based on the period of expected future benefits. Tax legislation requires a minimum amortization period of 5 years, while accounting legislation allows a maximum amortization period of 10 years.</p> <p>If at any time there are doubts with respect to the recoverability of deferred research and development expenses or with respect to the ability of the enterprise to continue as a going concern, the net book value of deferred research and development expenses should be written off immediately.</p>

<div data-bbox="334 204 422 228">(IAS 37)</div> <p data-bbox="129 304 627 651">Contingent assets should not be recognised since this may result in the recognition of income that may never be realised. However, when the realisation of income is virtually certain, then the related asset is not a contingent asset and its recognition is appropriate. Where an inflow of economic benefits is probable, an enterprise should disclose a brief description of the nature of the contingent assets at the balance sheet data, and, where practicable, an estimate of their financial effect, measured in accordance with IAS 37.</p>	<div data-bbox="778 204 1039 228">(SFAS 5, SOP 94-6, C59)</div> <p data-bbox="660 304 1133 504">Gain contingencies are usually not reflected in the accounts since to do so might be to recognize revenue prior to realization. While adequate disclosure regarding gain contingencies is appropriate, care should be exercised to avoid misleading implications as to the likelihood of realization.</p>	<div data-bbox="1212 204 1665 228">(NBC-T-4, Pronouncement XIII IBRACON)</div> <p data-bbox="1192 304 1672 536">In general, gain contingencies should not be accrued in the financial statements, based on the requirement that revenue only be recognized once realized. Adequate disclosure of the gain, including the nature of the gain and the value of the contingent gain (net of income tax and any other related costs and expenses), is recommended.</p>

IAS 7. Events after the balance sheet date	USA 7. Events after the balance sheet date	BR 7. Events after the balance sheet date
<p align="center">(IAS 10)</p> <p>Material events which take place after the balance sheet closing date require adjustments to the financial statements only if the statements furnish additional evidence for events which had already occurred at the balance sheet date, or indicate it is no longer reasonable to assume full or partial continuity of operations.</p> <p>Where non adjusting events after the balance sheet date are of such importance that non-disclosure would affect the ability of financial statement users to make proper evaluations and decisions, disclosure is required.</p> <p>Dividends declared after the balance sheet date can either be recognised or disclosed.</p>	<p align="center">(SFAS 5, SOP 94-6, C59)</p> <p>U.S. Accounting Standards do not deal explicitly with the treatment of subsequent events; however, Auditing Standards (AU 560) effectively establishes accounting standards in the U.S. with respect to this issue.</p> <p>U.S. Auditing Standards distinguish between the following two types of subsequent events, which require consideration by management and evaluation by the independent auditor:</p> <ul style="list-style-type: none"> ■ those events that provide additional evidence with respect to conditions that existed at the date of the balance sheet and affect the estimates inherent in the process of preparing financial statements; and ■ those events that provide evidence with respect to conditions that did not exist at the date of the balance sheet being reported on but arose subsequent to that date. <p>With respect to the first type of subsequent event, U.S. Auditing Standards require that financial statements be adjusted for any changes in estimates resulting from the use of such evidence.</p> <p>With respect to the second type, U.S. Auditing Standards state that these events should not result in adjustment of the financial statements, however some subsequent events of this nature may be of such a nature that disclosure of them is required to keep the financial statements from being misleading.</p>	<p align="center">(Law 6404/76)</p> <p>If significant, the effects of subsequent events should be disclosed.</p> <p>No adjustments to the financial statements are required. However, the accounting practice recognizes the effects of subsequent events in line with IAS.</p>

<div>IAS</div> <div>8. Construction contracts</div>	<div>USA</div> <div>8. Construction contracts</div>	<div>BR</div> <div>8. Construction contracts</div>
<div>(IAS 11, IAS 18)</div> <p>The percentage-of-completion method should be used to record revenue on services and construction contracts when the contract outcome can be reliably estimated. This is said to occur when the general revenue recognition criteria are met, and the stage of completion of the contract can be reliably measured.</p> <p>These guidelines are applicable to services and construction contracts, irrespective of the expected completion period.</p> <p>No method of assessing the stage of completion is mandated. Percentage-of-work-done and percentage-of-costs are all possible methods suggested by the standard.</p> <p>Where the contract outcome cannot be reliably measured, the revenues are recognized only to the extent of contract costs incurred are expected to be recovered.</p> <p>The completed-contract method is preferable where there is doubt about the forecasts, either because of a lack of reliable estimates or because of inherent uncertainty.</p> <p>Under this method revenue is recognized only if the contract is completed, or substantially so.</p> <p>A loss related to a contract should be provided for as soon as it is identified, at an amount sufficient to cover losses incurred to date and future losses through completion of the contract.</p>	<div>(SFAS 56, ARB 45, SOP 98-1)</div> <p>The percentage-of-completion accounting is the preferable method for recognizing revenue corresponding to long-term construction-type contracts, if estimates of costs to complete, and of the extent of progress towards completion, are reasonably reliable.</p> <p>Under this method, revenue (i.e. a percentage of total expected revenue) is recognized based upon the extent of completion. Ordinarily this is measured by reference to costs incurred as a percentage of total estimated costs (although others, such as those mentioned in IAS, are possible).</p> <p>The completed-contract method is preferable where there is doubt about the forecasts, either because of a lack of reliable estimates or because of inherent uncertainty.</p> <p>Under this method revenue is recognized only if the contract is completed, or substantially so.</p> <p>For a contract on which a loss is anticipated, generally accepted accounting principles require recognition of the entire anticipated loss as soon as the loss becomes evident.</p>	<div>(Pronouncement XVII IBRACON)</div> <p>There are three methods accepted:</p> <ul style="list-style-type: none"> ■ Percentage-of-completion Revenue is based upon the extent of completion, which may be measured either by reference to costs incurred as a percentage of total estimated costs, or by reference to the physical stage of completion in comparison to the total contract requirements. ■ Completed contract Revenue and costs are recognized only once the contract is completed. ■ Installment method Revenue and costs are recognized based on the receipt of installments, in accordance with the terms of the contract. <p>The above methods are applicable to construction contracts with an expected completion period of greater than 12 months.</p> <p>Where the contract outcome cannot be reliably measured, revenue is recognized to the extent of costs incurred, that are recoverable.</p> <p>A loss related to a contract should be provided for as soon as it is identified, at an amount sufficient to cover losses incurred to date and future losses through completion of the contract.</p>

IAS 9. Income taxes	USA 9. Income taxes	BR 9. Income taxes
<p align="center">(IAS 12)</p> <p>Taxes should be recorded in the financial statements on the accrual basis, by using the liability method.</p> <p>A current tax liability or asset is recognized for the estimated future tax effects attributable to temporary differences and tax loss carry-forwards.</p> <p>The carrying value of deferred tax assets is restricted to the amount that can be utilized against future taxable profits that will probably be available.</p> <p>The measurement of current and deferred tax liabilities and assets is based on provisions of the substantively enacted tax law, which may include announcements of future changes; otherwise the effects of future changes in tax laws or rates are not anticipated.</p> <p>A deferred tax liability should be recognised for all taxable temporary differences, unless the deferred tax arises from:</p> <ul style="list-style-type: none"> ■ goodwill for which amortisation is not deductible for tax purposes; or ■ the initial recognition of an asset or liability in a transaction which: i) is not a business combination; and ii) at the time of the transaction, affects neither accounting profit nor taxable profit (tax loss); 	<p align="center">(SFAS 109, I27)</p> <p>Similar to IAS, the liability method should be used in accounting for income taxes.</p> <p>A current tax liability or asset and current tax expense or benefit are recognized for the estimated taxes payable or refundable based on the tax returns for the current and previous years.</p> <p>Deferred tax liabilities or assets are recognized for the estimated future tax effects attributable to temporary differences and tax loss carry-forwards.</p> <p>The balance sheet carrying value of deferred tax assets is reduced, through a valuation allowance, so as to recognize (net) only the amount of any tax benefits that, based on available evidence, are more-likely-than-not to be realized.</p> <p>The measurement of current and deferred tax liabilities and assets is based on provisions of the enacted tax law; the effects of future changes in tax laws or rates are not anticipated.</p>	<p align="center">(NPC 20, CVM Decision 273/98)</p> <p>Similar to IAS, the liability method should be used in accounting for income taxes.</p> <p>A deferred tax liability should be recognised in relation to all taxable temporary differences.</p>

<div>IAS</div> <div>9. Income taxes</div>	<div>USA</div> <div>9. Income taxes</div>	<div>BR</div> <div>9. Income taxes</div>
<div>(IAS 12)</div> <p>A deferred tax asset should be recognised for all deductible temporary differences, unless the deferred tax arises from:</p> <ul style="list-style-type: none"> ■ negative goodwill which is treated as deferred income in accordance with IAS 22, Business Combinations; or ■ the initial recognition of an asset or liability in a transaction which: <ul style="list-style-type: none"> i) is not a business combination; and ii) at the time of the transaction, affects neither accounting profit nor taxable profit (tax loss); <p>Deferred tax liabilities and assets should always be classified as non-current.</p>	<div>(SFAS 109, I27)</div> <p>Deferred tax liabilities and assets, but not the valuation allowance, are classified in the balance sheet as either current or non-current according to the classification of the related asset or liability for reporting purposes. The valuation allowance is allocated against current and non-current assets pro rata to the allocation of all of the deferred tax assets as a whole.</p> <p>The expected timing of the reversal of deferred taxes is not considered in the classification of deferred tax balances except in certain instances where a deferred tax balance cannot be related to an identifiable asset or liability for financial reporting purposes.</p>	<div>(NPC 20, CVM Decision 273/98)</div> <p>A deferred tax asset should be recognised for all deductible temporary differences:</p> <ul style="list-style-type: none"> ■ when it is likely that the deferred tax asset can be utilized against future taxable profits, based on budgets and projections provided by administration; or ■ where a deferred tax liability which is sufficient in value and in a realization period that makes possible the compensation of the deferred tax asset, exists. <p>Deferred tax assets and liabilities are classified as either a long-term asset or a long term liability and are transferred to current assets or current liabilities when appropriate.</p>

<div>IAS</div> <div>10. Segment reporting</div>	<div>USA</div> <div>10. Segment reporting</div>	<div>BR</div> <div>10. Segment reporting</div>
<div>(IAS 14, IAS 36)</div> <p>Segmental disclosures are required of only those companies with publicly traded equity or debt securities, or those which are in the process of issuing such securities, but not to other economically significant entities.</p> <p>IAS uses a management approach to segmentation, based on the internal organizational components into which the company is divided for the purposes of internal financial reporting to its board. However, if this is based neither on product/service groups nor on geography then the basis should instead be identified by looking to the next lower level of internal organization that divides up the company into products/ services or geography based components subject to the provision that each such component must be subject to risks and returns that differ from other components.</p> <p>Broadly, any component so identified that accounts for 10% or more of the company's revenue, results of operating activities or total assets, is a disclosable segment. Otherwise, the components may be combined with other components on a risk and returns basis to form disclosable segments.</p> <p>The amounts disclosed do not follow the management approach. Instead the amounts are an analysis of the relevant figures as stated in the financial statements.</p>	<div>(SFAS 131, FTB 79-4, FTB, 79-5, S30)</div> <p>Segmental disclosures apply only to SEC registrants.</p> <p>An operating segment is a component of a business about which separate financial information is available that is evaluated regularly by the chief operating decision-maker in the allocation of resources and assessment of performance. This may be termed the "management approach", since the basis of segmentation is the internal management reporting structure irrespective of whether that reflects differences in risks and returns or operations.</p> <p>Segmental information is given about any operating segment that, broadly, accounts for 10% or more of all segments' revenue, results of operating activities, or total assets.</p> <p>General information, such as factors used to identify the reportable segments and the types of products and services from which reportable segments derive their revenues, are required to be disclosed. The numerical information is required to be stated on the basis upon which it is reported internally to the chief operating decision maker, even if this does accord with the basis adopted for external reporting in the financial statements.</p>	<p>Information by segment is not required.</p>

IAS 10. Segment reporting	USA 10. Segment reporting	BR 10. Segment reporting
<p data-bbox="293 204 464 228">(IAS 14, IAS 36)</p> <p data-bbox="129 451 598 507">For the primary basis, the following are required for each segment:</p> <ul data-bbox="129 512 626 978" style="list-style-type: none"> ■ revenue, distinguishing between external customers and inter-segment sales; ■ results of operations (i.e. broadly before interest, tax, and associates); ■ depreciation, impairment, reversal of impairment and other non-cash expenses (unless cash flow information is given); ■ operating, investing, and financing cash flows (as an alternative to the previous item); ■ the share of results and carrying value of equity accounted investments for any such investments that can be allocated substantially to a single segment; ■ total assets; ■ total liabilities; and ■ capital expenditures. <p data-bbox="129 1011 571 1123">There are supplementary requirements if the primary basis is geography in order that information about both location of operations and location of customers is given.</p> <p data-bbox="129 1157 615 1243">For the secondary basis, revenue (external and inter-segment separately), total assets and capital expenditure are required to be analyzed.</p> <p data-bbox="129 1276 589 1332">There is no requirement to disclose a significant customer.</p>	<p data-bbox="711 204 1106 228">(SFAS 131, FTB 79-4, FTB, 79-5, S30)</p> <p data-bbox="660 304 1146 416">In other words, the management approach extends to the figures also. The total amounts disclosed are required to be reconciled to the equivalent amounts in the financial statements.</p> <p data-bbox="660 451 1099 507">The numerical information required for each segment is:</p> <ul data-bbox="660 512 1139 946" style="list-style-type: none"> ■ profit or loss; ■ total assets; ■ the following if they are included in the above two measures or are otherwise reviewed by the chief-operating decision maker: <ul data-bbox="684 659 1139 946" style="list-style-type: none"> - revenue distinguishing between external customers and inter-segment sales; - interest income and expense; - unusual items; - tax; - extraordinary items; - capital expenditure and depreciation and other significant non-cash items; and - the share of income and net assets of equity method investees. <p data-bbox="660 1011 1139 1123">In addition, there are supplementary disclosures of revenue by product/service group, or geographical region if the management approach basis are not on such bases.</p> <p data-bbox="660 1276 1146 1388">If a single external customer accounts for 10% or more of the company's revenue, this fact together with the amount of that revenue and the segment in which it arose, must be disclosed.</p>	

<div>IAS</div> <div>11. Property, plant and equipment</div>	<div>USA</div> <div>11. Property, plant and equipment</div>	<div>BR</div> <div>11. Property, plant and equipment</div>
<p>(IAS 16, IAS 20, IAS 23, IAS 36, IAS 40, SIC 2)</p> <p>Property, plant and equipment should be recorded at historical cost (recommended treatment). Financing costs directly attributable to the construction of property, plant and equipment should be capitalized.</p> <p>Revaluation of property, plant and equipment is allowed as an alternative. Property, plant and equipment should be revalued to fair value, which is market value or, for plant and equipment without such a value, depreciated replacement cost. If one fixed asset is revalued, the entire asset category should be revalued. Revaluation should be repeated on a regular basis.</p> <p>Revaluation surpluses are credited to a revaluation reserve within equity unless they reverse a shortfall previously charged to the income statement, in which case it is taken directly to the income statement.</p> <p>Shortfalls on revaluation are recorded in the income statement unless they reverse a surplus of the same or lesser value previously generated by the same asset, in which case it is taken directly to the revaluation reserve. Shortfall is calculated on an item-by-item basis.</p> <p>When a revalued asset is written off, the revaluation surplus is transferred to retained earnings.</p> <p>Depreciation on a revalued asset is based upon its revalued amount, as are gains and losses on disposal.</p>	<p>(SFAS 34, SFAS 66, SFAS 67, I67, ARB 43)</p> <p>Property, plant and equipment should be recorded at historical cost. Financing costs directly attributable to the construction of the property, plant and equipment should be capitalized.</p> <p>Revaluation above historical cost is not permitted except in connection with business combinations accounted for using the purchase method.</p>	<p>(NPC 24 IBRACON, CVM Decision 183/95, Pronouncement VII IBRACON)</p> <p>Property, plant and equipment should be recorded at historical cost. Financing costs directly attributable to the construction of the fixed assets are capitalizable.</p> <p>Revaluation above historical cost is permitted. Revaluation surpluses are credited to a revaluation reserve within equity.</p> <p>Where an external valuation reveals that the value of a fixed asset is below its book value, the value of property, plant, and equipment should be reduced to the extent of the revaluation reserve surplus included in equity, corresponding to the same asset. The corresponding deferred tax balance should also be adjusted for this negative revaluation. A provision for losses should be established for any excess amount, through a charge to non-operational expenses. This provision should only be recorded if the loss is considered unrecoverable.</p> <p>A revaluation below historical cost may not be recorded if it is the first time that an asset is being subject to external valuation. The company should however consider whether the net book value of the asset is recoverable from future operations. If the recoverable value of the asset is below its net book value, and if this difference is not considered recoverable, a provision for losses should be recorded and charged to non-operational expenses.</p> <p>On sale or disposal of a discontinued revalued asset, the revaluation must be reversed.</p>

IAS 11. Property, plant and equipment	USA 11. Property, plant and equipment	BR 11. Property, plant and equipment
<p align="center">(IAS 16, IAS 20, IAS 23, IAS 36, IAS 40, SIC 2)</p> <p>The difference between the carrying amount of a revalued asset and its tax base is a temporary difference and gives rise to a deferred tax liability or asset.</p> <p>Beginning on or after January 1, 2000, the following rules apply to investment properties. Investment properties are land and buildings held for rental income and/or capital appreciation rather than for own use or for sale in the ordinary course of business. They exclude property held on operating leases. They may be either treated as a normal property or be undepreciated and stated at fair value, which is the market value, with changes therein flowing through the income statement.</p>	<p align="center">(SFAS 34, SFAS 66, SFAS 67, I67, ARB 43)</p> <p>Real estate investment properties are carried at depreciated historical cost. Depreciation must be provided on all buildings, including investment properties. However, property held for resale is generally not depreciated.</p> <p>SFAS 67 specifies the accounting treatment of pre-acquisition costs, taxes and insurance, project costs, incidental operations, and the allocation of capitalized costs to components of a real estate project, as these items relate to real estate projects.</p> <p>Upon sale or write-off of real estate assets, there are safeguards which prevent recognition of profit (full or partial) when the seller could incur future costs or when the seller has signed an option to repurchase at a fixed price.</p>	<p align="center">(NPC 24 IBRACON, CVM Decision 183/95, Pronouncement VII IBRACON)</p> <p>There are no specific requirements for real estate investments. However a provision for devaluation may be required if the carrying amounts are higher than its realization amounts.</p>

IAS**14. Retirement benefits****(IAS 19)**

The actuarial appraisal method used is the projected unit credit method. IAS does not mandate the frequency of valuations. It requires them to be of sufficient regularity that the amounts recognized in the financial statements do not differ from those which would be based on valuations as at the balance sheet date.

Thus, a valuation a few months before the year end is acceptable if it is adjusted for material subsequent events (including market price and discount rate changes up to the year end).

The total cost is essentially the entire periodic change in the plan liabilities less assets, aside from certain changes not fully recognized.

The total comprises the following:

- current service cost (increase in the present value of the benefit obligation due to the current year's service);
- interest cost (the unwinding of discount in the present value of the benefit obligation);
- expected return on plan assets;
- certain actuarial gains and losses (i.e. the differences between actual and expected out-turn of the valuation of the obligation and the assets, including the effect of assumption changes); and
- certain past service costs.

For the purpose of measuring the annual increase in service cost, the attribution of benefits begins when the employee joins the benefits plan and terminates when the right to the benefit is no longer conditional upon future service.

USA**14. Retirement benefits****(SFAS 87, SFAS 88, P16)**

The actuarial appraisal method used is the projected unit credit method, and the valuation date can be at or within three months of each fiscal year end (although the information may be prepared as at an earlier date and projected forward to the year end).

The annual pension cost is separated into four categories, as follows:

- service cost - the actuarial present value of future service benefits earned by all participants during the current year;
- interest cost - the increase in the benefit obligation due to the passage of time;
- actual return on plan assets - determined based on the fair value of plan assets at the beginning and the end of the period, adjusted for contributions and benefit payments.
- Net amortization and deferral of the following components:
 - the net transition obligation (or asset);
 - the prior service cost; and
 - the difference between the estimated and actual amounts of both the projected benefit obligation and the return on plan assets.

For the purpose of measuring the annual increase in service cost, the attribution of benefits begins when the plan grants credit and terminates at retirement (retirement costs) or when the employee becomes fully eligible (other post retirement benefits).

BR**14. Retirement benefits****(CVM Decision 371,
NPC 26 IBRACON)**

The actuarial appraisal method used is the projected unit credit method. It does not mandate the frequency of valuations. It requires them to be of sufficient regularity that the amounts recognized in the financial statements do not differ from those which would be based on valuations as at the balance sheet date.

The total cost is essentially the entire periodic change in the plan liabilities less assets, aside from certain changes not fully recognized.

The total comprises the following:

- current service cost (increase in the present value of the benefit obligation due to the current year's service);
- interest cost (the unwinding of discount in the present value of the benefit obligation);
- expected return on plan assets;
- certain actuarial gains and losses (i.e. the differences between actual and expected out-turn of the valuation of the obligation and the assets, including the effect of assumption changes); and
- certain past service costs.

For the purpose of measuring the annual increase in service cost, the attribution of benefits begins when the employee joins the benefits plan and terminates when the right to the benefit is no longer conditional upon future service.

<div>(IAS 21, IAS 29, SIC 11, SIC 19)</div> <p>Translation of foreign currency financial statements</p> <p>Where a foreign operation is an integral part of the operations of the reporting company, its financial statements should be translated as if its transactions were those of the reporting company (as described above).</p> <p>In most practical cases, the operations are not integral and are termed “foreign entities”. In these cases, the following procedures should be applied to translate the financial statements of a foreign entity for future consolidation:</p> <ol style="list-style-type: none"> assets and liabilities are translated at the rate on the balance sheet date; items in the income statement are translated at rates as at the dates of the relevant transactions, although an appropriate average rate may be used; exchange differences so arising are taken directly to equity. The cumulative amount of this translation adjustment must be disclosed. <p>Hyper-inflation</p> <p>If the financial statements of a foreign entity are affected by high inflation, they should be adjusted for price-level restatement before translation. As an alternative, “re-measurement” in the “reporting currency” may be performed.</p>	<div>(SFAS 52, F60)</div> <p>Translation of foreign currency financial statements</p> <p>When an entity is merely an extension of the parent company, its functional currency will often not be the currency of the country in it is located or the currency in which its records are maintained. In that case, the functional currency would be the reporting currency of the parent company, and would be translated as if its transactions were those of the parent (as described above).</p> <p>For subsidiaries for which the local currency is the functional currency, the exchange rate at the balance sheet date is used to convert the assets and liabilities at the balance sheet date from the functional currency to the reporting currency, as follows:</p> <ol style="list-style-type: none"> assets and liabilities are translated at the rate on the balance sheet date; revenues, expenses, gains and losses are translated at the exchange rate in effect when these items were recognized. In practice an appropriately weighted average rate may be used; translation adjustments are included in other comprehensive income, and are accumulated and disclosed as a separate component of consolidated stockholders’ equity. <p>High Inflation</p> <p>Highly inflationary economies include those with cumulative inflation of 100% or more over a three year period. The financial statements of a foreign entity in such an economy must be remeasured as if the functional currency were the reporting currency.</p>	<div>(Law 6404/76, CVM Decision 28/86, Pronouncement XVIII IBRACON)</div> <p>Translation of foreign currency financial statements</p> <p>Foreign subsidiaries’ financial statements (income statement and balance sheet) are translated at the exchange rate on the balance sheet date, unless the subsidiary is based in a hyperinflationary economy with no price-level restatement system. In this case, either the historical translation rate or price level accounting is used.</p> <p>High Inflation</p> <p>For highly inflationary economies the monetary and nonmonetary methods are required. The inflation accounting is required for the Brazilian entities under the accounting practices determined by the Federal Council of Accountants-CFC, which is the Brazilian official professional body. The statutory law (Lei 6404/76) does not require inflation accounting.</p>

<p data-bbox="178 204 578 228">(IAS 7, IAS 22, IAS 27, SIC 9, SIC 17)</p> <p data-bbox="129 304 602 536">An acquisition of a business or a company is recorded at cost measured at the date of acquisition. Cost is either the amount of cash or cash equivalents paid, or the fair value of the other purchase consideration given, plus any costs directly attributable to the acquisition. The date of acquisition is the date on which control is effectively transferred to the acquirer.</p> <p data-bbox="129 628 620 770">Contingent consideration (e.g. possible future cash payments or stock issues) is provided for at the outset where it is probable that it will be paid. It is subsequently adjusted against goodwill, as the estimate of the amount payable is revised.</p> <p data-bbox="129 805 615 948">Any payments made by the acquirer under a guarantee of the value of its shares or debt given as consideration are not themselves consideration but are debited to shareholders' equity or against the debt as the case may be.</p> <p data-bbox="129 983 615 1155">Costs directly attributable to the acquisition include the usual professional fees as well as the costs of issuing equity securities but exclude the costs of issuing debt, which are deducted from the debt's carrying value. Internal costs cannot be included.</p> <p data-bbox="129 1190 611 1362">The identifiable assets and liabilities of the acquired entity that existed at the date of acquisition, plus certain restructuring provisions, are brought in at fair value. The identifiable assets include any intangibles that can be reliably measured.</p> <p data-bbox="129 1366 584 1422">The difference between the aggregate of the fair values and the cost of acquisition is goodwill.</p>	<p data-bbox="729 204 1093 260">(SFAS 79, SFAS 109, B50, APB 16, EITF 95-3, EITF 95-19)</p> <p data-bbox="662 304 1148 592">An acquisition of a business or company is recorded at cost measured at the date on which the parties reach agreement and announce the transaction. Cost is generally measured by the fair value of the consideration, or in rare cases, the fair value of the company acquired, if that is more clearly evident. The cost of acquisition also includes those direct costs that would not have been incurred had the acquisition not been initiated.</p> <p data-bbox="662 628 1148 740">Contingent consideration forms part of the cost of acquisition and thus goodwill, and is recognized when the contingency is resolved and the consideration becomes payable (or issuable).</p> <p data-bbox="662 805 1142 917">Any payments made under guarantees of the value of its shares or debt issued as consideration, would themselves be additional consideration for the acquisition.</p> <p data-bbox="662 983 1139 1038">The registration and issue costs of equity securities are dealt with as a reduction of equity.</p> <p data-bbox="662 1190 1117 1362">The acquirer records the acquired assets, less liabilities assumed, at cost to the acquirer. The difference between the cost of an acquired entity and the sum of the fair values of tangible and identifiable intangible assets, less liabilities assumed, is recorded as goodwill.</p>	<p data-bbox="1306 204 1576 260">(CVM Instruction 247/96, CVM Instruction 285/98)</p> <p data-bbox="1192 304 1639 384">There is no clear definition as to the date to be adopted. However, the date of the acquisition is used.</p> <p data-bbox="1192 419 1648 539">The basis of accounting is cost. The difference between the acquisition cost and the carrying amounts of the net assets acquired are recorded as goodwill.</p> <p data-bbox="1192 628 1661 716">The goodwill or negative goodwill on acquisition should be recorded along with an indication of the economic justification.</p> <p data-bbox="1192 805 1676 917">Any payments made under guarantees of the value of its shares or debt issued as consideration, would themselves be additional consideration for the acquisition.</p> <p data-bbox="1192 983 1594 1038">The registration and issue costs of equity securities are accounted as an expense.</p>

IAS 17. Business combination	USA 17. Business combination	BR 17. Business combination
<p data-bbox="180 204 576 229">(IAS 7, IAS 22, IAS 27, SIC 9, SIC 17)</p> <p data-bbox="129 304 616 416">Positive goodwill on a business acquisition is capitalized and amortized over a finite life usually, although not necessarily always, of less than 20 years.</p> <p data-bbox="129 778 584 1038">The restructuring provisions that must be recognized, even though they are not a liability of the acquired entity, are in respect of the acquirer's restructuring of the acquired entity, the main features of which have been planned and announced by the date of acquisition. A detailed formal plan is then required within three months of acquisition or by the date of approval of the financial statements.</p>	<p data-bbox="729 204 1090 256">(SFAS 79, SFAS 109, B50, APB 16, EITF 95-3, EITF 95-19)</p> <p data-bbox="660 304 1104 357">Positive goodwill is capitalized and amortized over a period not to exceed 40 years.</p> <p data-bbox="660 778 1152 1334">Redundancy and reorganization acquisition accruals are generally not allowed; only the direct costs of an acquisition should be included in the cost of a purchased entity. Indirect expenses of the acquiring company, including costs associated with the closing of duplicate facilities, should be charged to expense when incurred. Costs of a plan to exit an activity of an acquired company, or terminate involuntarily employees of an acquired company, or relocate employees of an acquired company, should be recognized as liabilities assumed in the purchase if specific conditions are met. These conditions are similar to those for restructuring provisions, with the exception that at the time of acquisition, management needs only to begin to assess the restructuring plan and within one year to finalize that plan and communicate it to relevant employees.</p>	<p data-bbox="1308 204 1567 256">(CVM Instruction 247/96, CVM Instruction 285/98)</p> <p data-bbox="1192 304 1668 564">The goodwill resulting from projected future earnings is amortized over the period of the projections or on disposal or impairment of the investment. The projections must be reviewed annually and can not exceed a 10-year period. Exceptions are permitted for goodwill paid on public concessions, which are amortized over the period the concession is granted or on disposal or impairment of the investment.</p> <p data-bbox="1192 600 1627 711">The goodwill, which is not supported by an economic reason (directly related to an asset or based on future earnings), must be written off on the acquisition date.</p>

IAS 17. Business combination**(IAS 7, IAS 22, IAS 27, SIC 9, SIC 17)**

Unamortized negative goodwill is presented as a deduction from the asset category containing positive goodwill, effectively as a negative asset. It is amortized and credited to the income statement, as follows:

- first, to the extent that it relates to certain post acquisition costs, at the same time as those costs;
- the balance, up to an amount of the fair value of the non-monetary assets acquired, over the life of the depreciable assets; and
- then any remaining balance, immediately.

USA 17. Business combination**(SFAS 79, SFAS 109, B50, APB 16, EITF 95-3, EITF 95-19)**

Negative goodwill is allocated proportionately to reduce the values assigned to non-current assets (except long-term investments in marketable securities).

If these non-current assets are thereby reduced to a zero value, any remaining negative goodwill is treated as a deferred credit and is amortized systematically to income over the period estimated to benefit, not exceeding 40 years.

BR 17. Business combination**(CVM Instruction 247/96, CVM Instruction 285/98)**

The negative goodwill is amortized only on the disposal or impairment of the investment.

IAS 18. Investments in associates**(IAS 1, IAS 28)**

An associate is an investee (other than a subsidiary) in which the company has significant influence; that is, the power to participate in its financial and operating policy decisions.

This is presumed to be when the company has 20% or more of the voting power, unless it can clearly be demonstrated otherwise.

Associates are accounted for using the equity method.

In the balance sheet, an investment in an associate is stated at cost, i.e. including normal acquisition accounted goodwill, plus the post-acquisition share of profits and other changes in net assets. The share of profits is included in the income statement in a single line located after finance costs and before tax.

The usual inter-company eliminations are made, to the extent of the investor's interest.

The investor's share of losses of the associate are recognized until the equity investment is reduced to zero and thereafter to the extent of any investor's obligation to meet the associate's obligations.

USA 18. Investments in associates**(ABP 18, FIN 35, I82)**

US-GAAP does not have a comparable definition, rather, it provides guidance as to specific circumstances under which equity accounting should be used.

The equity method of accounting is used to account for any investments where the investor has the ability to exercise significant influence over operating and financial policies of the investee. An investor owning 20% or more of the voting stock of an investee is presumed to have the ability to exercise significant influence over the investee, unless this presumption is overcome by predominant evidence to the contrary.

An investor using the equity method initially records an investment at cost. Subsequently, the carrying amount of the investment is increased to reflect the investor's share of income of the investee and is reduced to reflect the investor's share of losses of the investee or dividends received from the investee. The investor's share of the income or losses of the investee is included in the investor's net income (after inter-company eliminations). An investor's share of after tax earnings or losses from the investee is ordinarily shown in its income statement as a single amount.

Inter-company profit eliminations are usually made to the extent of the investor's interest.

The investor's share of losses in the associate is recognized until the investment is reduced to zero and thereafter to the extent of any investor's obligation to meet the associate's obligations.

BR 18. Investments in associates**(CVM Instruction 247/96, Law 6404/76)**

An associate is an investee in which a company retains 10% share in capital. An investee is equivalent to an associate when a) a company indirectly retains 10% or more of the voting shares without control; b) a company retain 10% directly without control and independently of the total participation in the capital.

The equity accounting is used for the valuation of the relevant investment in each associate and or its equivalent when the investor has influence in the management or it retains directly or indirectly more than 20% share of participation.

An investor using the equity method initially records an investment at cost. Subsequently, the carrying amount of the investment is increased to reflect the investor's share of income of the investee and is reduced to reflect the investor's share of losses of the investee or dividends received from the investee. The investor's share of the income or losses of the investee is included in the investor's net income (after inter-company eliminations). An investor's share of after tax earnings or losses from the investee is ordinarily shown in its income statement as a single amount.

The usual inter-company eliminations are made, to the extent of the investor's interest.

The investor's share of losses of the associate are recognized until the equity investment is reduced to zero and thereafter to the extent of any investor's obligation to meet the associate's obligations.

IAS 25. Impairment of assets	USA 25. Impairment of assets	BR 25. Impairment of assets
<p align="center">(IAS 16, IAS 36, IAS 38, SIC 14)</p> <p>IAS 36 covers the impairment of virtually all non-financial assets (with the exception for example of inventories and deferred taxes) and goodwill plus that of investments, in the parent company accounts, in subsidiaries, associates, and joint ventures. It does not cover other investments.</p> <p>Impairment testing is required where there is an indication of a possible impairment, for example adverse changes in the business or regulatory environment or in performance. In addition it is required annually for goodwill or intangible assets that have lives of over 20 years and, for any intangibles not yet available for use.</p> <p>If review for impairment is required, then the relevant assets' useful lives and depreciation method may need to be reviewed and revised. If the recorded value of the asset is superior to its expected recoverable value, a provision for adjustment to recoverable value should be established.</p> <p>In performing impairment testing, assets are grouped together into the smallest group that generate cash inflows from continuing use that are largely independent of the cash inflows of other assets or groups thereof. Such a group is known as a cash generating unit (CGU).</p>	<p align="center">(SFAS 121, I08)</p> <p>SFAS 121 provides guidelines for recognition of impairment losses on long lived assets and certain intangibles and related goodwill. Its scope excludes financial instruments, long term customer relationships of financial institutions, mortgage and other servicing rights, deferred policy acquisition costs and deferred tax assets.</p> <p>Companies are required to review assets for possible impairment when events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Examples of such events or changes in circumstances include: declines in market value of assets; changes in the extent or manner in which assets are used; adverse changes in legal factors, business climate or actions by a regulator; accumulation of costs in excess of amounts originally expected in acquiring or constructing an asset; and current period operating or cash flow losses combined with a history of operating losses and/or projections for continuing losses.</p> <p>The standard also acknowledges that the recognition of impairment is influenced by depreciation rates and methods used by a company. A company that is required to evaluate an asset for impairment is also encouraged to re-evaluate depreciation policies. Any changes therein should be considered separately from the measurement of impairment, if any.</p> <p>Although the statement uses the term asset, that term usually refers to a group of assets. Assets are to be grouped at the lowest level for which identifiable cash flows are independent from the cash flows of other groups of assets.</p>	<p align="center">(NPC 24 IBRACON, CVM Decision 183/95)</p> <p>NPC 24 covers revaluation of tangible assets and provides some guidance on the recoverability of assets.</p> <p>Permanent assets must be periodically monitored in order to determine whether their carrying amounts are not higher than their realization amounts.</p> <p>The analysis of recoverability must consider the grouping of assets and the related assets registered as intangible.</p>

<div>IAS</div> <div>25. Impairment of assets</div>	<div>USA</div> <div>25. Impairment of assets</div>	<div>BR</div> <div>25. Impairment of assets</div>
<div data-bbox="209 204 547 228">(IAS 16, IAS 36, IAS 38, SIC 14)</div> <p data-bbox="129 304 627 475">Goodwill is allocated to each CGU where it can reasonably be done; where it cannot, then two impairment tests are carried out, one at individual CGU level without goodwill and the second with the minimum collection of CGUs to which the goodwill can be allocated.</p> <p data-bbox="129 630 600 801">The measurement is not separate from the recognition test. An impairment is booked to the extent that the book value of a CGU exceeds the recoverable amount. The recoverable amount is considered to be the higher of its value in use and its net selling price.</p> <p data-bbox="129 834 578 975">The value in use is the discounted future net cash flows (pre-tax) from the continuing use of the CGU. The discount rate must reflect an appropriate market premium for the risks inherent in the cash flows.</p>	<div data-bbox="826 204 991 228">(SFAS 121, I08)</div> <p data-bbox="660 304 1152 592">Goodwill from a business purchase that is associated with a group of assets being evaluated for impairment should be included in the carrying amount of the related assets. If the goodwill is associated with only part of the assets under evaluation, the goodwill should be allocated among the related assets based on the relative fair values of the assets acquired at the acquisition date unless there is evidence to support a different allocation method.</p> <p data-bbox="660 630 1146 742">The standard provides a threshold to determine whether recognition of an impairment is required or allowed and a separate calculation to measure impairment, as follows:</p> <ul data-bbox="660 746 1146 1153" style="list-style-type: none"> <li data-bbox="660 746 1146 887">■ Recognition trigger The estimated future cash flows to be derived from the use and disposition of an asset, undiscounted and without interest, is compared with the carrying amount of the asset. If the expected cash flows are in excess of the carrying amount, recognition of an impairment loss is not allowed. <li data-bbox="660 983 1112 1153">■ Measurement Measurement of an impairment loss is determined by reducing the carrying amount of an asset to its fair value. The reduced carrying amount becomes the new cost basis for the asset. <p data-bbox="660 1190 1144 1422">Cash flows consist of the future cash inflows expected to be generated by an asset less the future cash outflows expected to be necessary to obtain those inflows. The future cash flows are the company's best estimate based on reasonable and supportable assumptions and projections. Fair value should be based on quoted market prices, if available.</p>	<div data-bbox="1323 204 1557 256">(NPC 24 IBRACON, CVM Decision 183/95)</div> <p data-bbox="1192 304 1590 328">No specific treatment exists for goodwill.</p> <p data-bbox="1192 630 1663 801">A provision for recoverability of an asset is recorded when the recoverable value of an asset is lower than its carrying value and the reduction is of permanent nature. The recoverable value is preferably based on the discounted cash flows of the total Company operations.</p>

IAS 25. Impairment of assets	USA 25. Impairment of assets	BR 25. Impairment of assets
<p data-bbox="211 204 546 228">(IAS 16, IAS 36, IAS 38, SIC 14)</p> <p data-bbox="131 539 582 624">Any impairment is allocated first to goodwill then, pro rata amongst the CGU's other assets (including intangibles).</p> <p data-bbox="131 687 615 1182">If the recoverable amount subsequently increases then in some cases the impairment is reversed. The general rule is that this is done where the increase is caused other than by the unwinding of the discount in the value in use, whereby an asset's value in use becomes greater than the asset's carrying amount simply because the present value of future cash inflows increases as they become closer. Where goodwill is concerned there is an additional test that the original impairment was caused by a specific, exceptional external event that was not expected to recur but that a subsequent external event has reversed its effect. In all cases the maximum amount of the reversal is such as to restore the assets of the CGU to their original pre-impairment carrying value less subsequent depreciation.</p> <p data-bbox="131 1219 615 1390">Impairment losses are charged to the income statement, although no particular location therein is specified, except where the impaired asset is a revalued one. In that case, it is charged directly to the revaluation reserve to the extent that it reverses a previous revaluation surplus.</p>	<p data-bbox="828 204 990 228">(SFAS 121, I08)</p> <p data-bbox="662 304 1139 504">If quoted market prices are not available, the best information available is used. Such information may include present value of estimated pre-tax cash flows using a discount rate commensurate with the risks involved, option pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis.</p> <p data-bbox="662 539 1139 651">Any impairment recognized is allocated first to goodwill, notwithstanding that the recoverability of the written down goodwill must also be assessed on an entity basis.</p> <p data-bbox="662 687 1135 740">Recognition of any subsequent recoveries in fair value is prohibited.</p> <p data-bbox="662 1219 1124 1272">Impairment losses are included in income from continuing operations before income taxes.</p>	<p data-bbox="1323 204 1557 256">(NPC 24 IBRACON, CVM Decision 183/95)</p> <p data-bbox="1193 539 1636 592">There is no specific guidance on the allocation of the provision.</p> <p data-bbox="1193 687 1676 799">The provision to the recoverable amounts of an asset may be reversed if the recoverable amounts increase. The reversal must be limited to the original carrying amounts of the assets.</p> <p data-bbox="1193 1219 1681 1272">There is no specific guidance on the classification of the provision in the income statement.</p>
